Product Description

Description

High-quality auto transformer series provides the advantages of excellent frequency response, low insertion loss and reliable performance for volume control application in 25 and 70.7-volt systems. Attenuation is accomplished in ten make before break steps plus positive off position. (No stop between maximum and off position to prevent switch damage). Contacts are silver plated for noise-free operation. Units feature a removable terminal block and include stainless steel plate, with stamped and filled or screen printed dial scale and a skirted black knob. White and ivory plastic plates with matching skirted knobs also available in Decora style. UL Listed. Must be a reseller to purchase this product

Features

- All models mount into most 1-gang E.O. boxes
- Superior frequency response
- Easy installation via removable "Phoenix" style four-pole connector
