### Product Description

The Fluke Networks® NFC-Kit-Case Fiber Optic Cleaning Kit with Case is designed to help users ensure all fiber end-faces are clean before every mating. Fiber contamination is widely regarded to be one of the foremost causes of fiber failure, but with the cleaning materials included in this kit, users have nothing to fear. The kit includes items made from lint-free materials that enable an optimal wet/dry cleaning sequence, swabs that are designed to fit many connector port styles, and other such innovations that help to eradicate the causes of contamination. The NFC-Cube Cleaning Cube is one of the items included within the kit, and it contains wipes capable of cleaning up to 500 end-faces. Similarly, the kit includes two NFC-Cards-5pack Fiber Optic Cleaning Cards that feature 12 sealed cleaning zones each for controlled cleaning. The kit also includes a NFC-SolventPen that dispenses a special fiber solvent that is designed to be used in conjunction with the cleaning cube or cleaning cards. The kit contains two types of swabs, 1.25mm and 2.5mm that allow the user to very precisely clean small connector ports. The NFC-Swabs-1.25mm may be used on both LC and MU ports while the NFC-Swabs-2.5mm are designed for SC and ST ports. Both of these types of swabs may be used with the cleaning cube in order to conserve solvent.
